## Junikowski GRP sewer main in Poznan awarded to Amiantit Poland

Amiantit Poland Sp. z o.o. has just completed the supply of Flowtite GRP pipes for the rehabilitation of the Junikowski sewer main, located at Dolna Wilda Street in Poznan. This prestigious construction, which took place in front of the Aquanet S.A headquarters – a water supply company in Poznan – was facing some huge logistic challenges due to short, given deadlines for completion.

The rehabilitation work took place at a DN 1400 concrete sewer line with a length of 1 600 metres. For relining, Flowtite GRP sliplining pipes in DN 1300, SN 5000 and PN1 were delivered, together with GRP chambers that were also installed along the line.
